**B- Translate the following sentences into Persian.**

1. Local winds are the winds that occur when a particular synoptic weather pattern combines with local topography.
2. The moisture in the air condenses and falls on the land as rain. On reaching the land surface, some of it evaporates back into the air again.
3. The role of biological processes in soil development is very important. Nevertheless, vegetation is not the most important soil – forming factor.
4. The Earth will not last for ever. Eventually the sun will change its structure, and for a time will send out 100 times as much radiation as it does now.
5. An earthquake results from the sudden movement of rock that has been under long stress.
